FIBERGLASS LAGGING CLOTH – STYLE 2025/ 9383 DATA SHEET

Glass lagging fabrics are designed to replace asbestos. They are used for removable blankets, pipe wrapping, turbine blankets, fittings, flange covers and engine exhaust pipes. The cloth has been heat treated so that large percentages of organic binders on the fabric have been removed. This enhances the hand and weave setting characteristics.

SPECIFICATIONS:

Weight	18.5 Oz. Sq. Yd.
Thickness	.030"
Thread Count	20 x 14
Tensile Warp	200
